# CORKSOL PROJECT CASE STUDY

Location: **Bolton**

Applicator: **P Taylor and Sons Plastering**

Solution: **CorkSol SprayCork**

P Taylor and Sons Plastering, part of the CorkSol Independent Applicator Network, have recently completed work on a project in Bolton.

This detached property had a failed pebbledash finish (see bottom right image). The customer wasn't happy with the aesthetic of the pebbledash and it was causing the property to suffer from heat loss. As a result, the home was very cold and would lose heat quickly.

P Taylor and Sons Plastering were able to offer SprayCork as a solution to solve the cold home and prevent the extreme heat loss, with three external coats of SprayCork in the colour Arctic. The heating up of the walls can also prevent the formation of mould, making the home healthier as well as cosier.

The customer was extremely happy with the finish of SprayCork and how much it upgraded the curb appeal of their property. They are also very much looking forward to retaining some heat in their home ready for the winter months.
